

# ABSTRACT

A hydrophilic polyorganosiloxane composition  
5 comprising (A) a curable organopolysiloxane containing at  
least 5 mol% of diphenylsiloxane units or at least 10 mol% of  
methylphenylsiloxane units, (B) a curing agent, and (C) a  
specific polyether cures into an elastomeric or gel-like  
silicone product having excellent hydrophilic properties and  
10 prevents separation of the polyether over time.
